

ALGORITHMIC TRADING PORTFOLIO is an open-ended hedge fund with intraday trading frequency and high liquidity. The fund's objectives are to provide absolute returns with a moderate risk-return profile and low correlation to equity markets and other investments and asset classes. The fund seeks to achieve its objectives through the implementation of a portfolio of systematic trading models. The multi asset strategy trades ~42 global equity, metals, interest rate, agriculture, energy and currency markets, using regulated, liquid and exchange traded financial instruments - futures. Long and short positions can be held seeking to profit from identified short, medium mean reversion seasonality and trend flowing patterns. Portfolio of ~350 independent automated trading systems aims to provide profit every month. Our strict risk management are based on a clearly defined set of rules, adjusting the portfolio dynamically to changing market conditions. Please visit <https://am.orion.lt/en/fondas/algorithmic-trading-portfolio/> and www.algo.lt/en for more details.

M SUBFUND STATISTICS AFTER FEES (SINCE 2013)

This month's result	2.75%
Returns since Fund launch (2013)	41.53%
Last 12 months return	-0.89%
Positive months	70.65%
Max drawdown from peak	-12.14%

Strategy	Technical analysis

UNIT VALUE

MANAGER MONTHLY REPORT

Aistis Raudys, Ph.D. in artificial intelligence, 10 y. in finance, former Deutsche Bank and Société Générale quantitative researcher. Author of ATP models and strategies.

Algorithmic Trading Portfolio ended the summer with a gain of +2.75%. Trading was successful in all asset classes during August. Most of the earnings were gained from bonds (+1.74%) and metals (+0.52%), with slightly lower profits from currencies (+0.21%), stock indices (+0.15%) and agricultural products (+0.1%). Looking at individual instruments, 30-year Ultra US bonds (+0.61%) and gold (+0.32%) performed best. Algorithms also worked profitable when trading Euro bund, 30-year US and Long-term British Gilt bonds (+0.3%, +0.29% and +0.28% respectively). Wheat (-0.15%) and cocoa (-0.1%) can be noted as the instruments that performed worst this month.

No doubt the world's attention is still focused on the Covid-19 pandemic situation. Although some could have expected that the hot summer months were to slow the spread of the disease it is clear now that heat did not help. The number of cases worldwide has already reached 25 million (up from 10 million in early July). It seems that some regions of Europe are already approaching the second wave of the disease. Economic indicators continued to improve, albeit at a slower pace than in May and June, thanks to lifted lockdowns and easing restrictions on the spread of the disease. In this context, investors felt safe, with almost all major global stock indices rising (MSCI World +4.6%) and bonds falling (Barclays Global Aggregate -0.2%).

The results have been generated live trading Managed Account (5 months are solely backtesting results in italic). Same trading approach and models have been implemented within ALGORITHMIC TRADING PORTFOLIO Fund starting 2013-01. 2011 and 2012 performance results are presented in accordance with UAB KPMG Baltics Independent Reasonable Assurance Report. Since 2013 results are verified by SEB depository bank. Different fees were applied in different periods. Since 2008-01-01 to 2012-12-31 results include pro forma management fee 1% and pro forma performance fee 20%. Since inception of the Fund (2013) results are displayed after Fund's fees.

ALGORITHMIC trading portfolio

M SUBFUND MONTHLY REPORT
2020 AUGUST

MONTHLY PROFIT/LOSS BY INSTRUMENT

One key part of our trading success is multi strategy approach. Models exploit short term mean reversion, short term trend following, short term seasonality and index inefficiencies. Some strategies work on minute to hour frequency and some work on daily or even weekly data. These models are used for more than 40 different futures contracts. Put together, they create numerous independent trading patterns. Single strategy will almost always suffer from periods of zero or negative returns. Having several hundred fundamentally different models in our portfolio allows us to compensate one's losses by gains of other models. Therefore, whole fund performance is almost always positive with more than 75% of positive months. Average monthly losses are similar to average monthly profits. All of it results in almost steady performance, however risk is not entirely eliminated.

STRATEGY CORRELATION TO OTHER ASSET CLASSES

Trading results show almost non-existent correlation to asset classes returns. Correlation in range -0.3 to 0.3 means that relationship between returns is weak. Therefore, Fund's results are only weakly affected by asset classes rises and falls in a long term. Thus returns usually do not depend on whether for example stock market gains or loses value. For further information about Fund's returns correlation please click here:

www.algo.lt/wp-content/uploads/ATP-koreliacijos-EN.pdf

FUND ALLOCATION

A large cash reserve is essential for risk management of the investments. It ensures that trading is successfully maintained even if a part of funds are lost. The average trading margin allocation is 5%-30%. Cash is held in bank account at SEB (Lithuania) and/or in J.P. Morgan (USA) at the broker (TradeStation) segregated account. To reduce unused cash share, some of funds may be invested in most liquid very low risk short term USA treasury notes and/or EU bonds.

MONTHLY TRADING VOLUME

A trade sizes are different. A quantity for every strategy is determined by diversification principals and current market and strategy behaviour. We constantly improve execution of around 2000 trades per month in order to maximise trading effect. One of the methods: trades are split and executed with less quantity per trade to reduce market impact.

MONTHLY PROFIT FROM MARKET RISE/FALL

At any point, strategy can be long, short or flat, so profits can be generated in rising and falling markets. It results in steadier performance regardless of current economic cycle, crisis, recession. Even in a calm period market tends to move like waves: fall and rise in a short (few days) period. Fund's strategies trades on these few days moves and can make profit even when selling in a rising market or buying in a falling one.
